

# CAPABILITY STATEMENT

---

More than just a lift.

Part of FMS Group, Safety Lift Solutions is an industry leader in Jacking technology.

**“A value add for  
our clients”**

## SLS – Capabilities:

- 1200T, 1280T and 2000T lifting systems.
- 6 port jacking consoles which allow us to add more jacks to a synchronized lift.
- Under car body/low profile jack system.
- PLC controlled hydraulic lifting system, with positively isolated mechanical locking.
- Stand-alone DHPU/Motivator for undercarriage walk out, cylinder removal and machine recovery.
- Fast and efficient Slew Bearing replacement using undercarriage walk out or bearing table.
- Various stands and specialised tooling.
- End-to-end project management and planning resources.
- Machining capabilities.

SLS offers more than just lifting solutions, we can also assist with attachment and hydraulic component changeouts by utilising our DHPU/Motivator; this removes the intermittent operation requirement, making it safer, faster, and more reliable.

Our jacking systems integrate the latest technology for enhanced safety and efficiency. Utilizing the VR headset for hands-free operation greatly enables operators to access live information and alerts effortlessly.

“VR integration enhances situational awareness and response time, contributing to safer and more effective handling of the equipment.”

**"Being the most-recently built jacking system, FMS Group have sought to build the most advanced system on the market. These features are not commonly seen in existing jacking systems.**

**FIELD's opinion of the jacking system is that it is well considered and able to safely conduct lifts up to the rated capacity of the jacks. The team at FMS Group have experience in this field and have developed jacking equipment that covers both safety and precision."**

Solutions

---

Safety Lift Solutions offers comprehensive, end-to-end solutions for major component replacements. Our team of seasoned professionals thrives on executing large-scale projects. Leveraging the expertise of our highly skilled engineers, we tailor jacking studies to meet the specific needs of our clients. By collaborating closely, we identify opportunities to perform additional work while the asset is on jacks, maximizing safety and optimizing outage periods. FMS Group are well equipped to provide specialized tooling and machining to save time and enhance the project outcomes.

---

SLS have custom made load skates and skid system, capable of moving the heaviest of equipment. These load skates have been incorporated into our track frame skate, bucket roller and dipper slide systems.

If you need heavy equipment or machines moved, reach out to our team for a customised solution.
